PROFESSIONAL SUMMARY

I am a DevOps and Cloud Infrastructure Engineer with **7 years of hands-on experience** supporting production systems across cloud, on-premise, and remote environments. My background combines infrastructure engineering, Kubernetes operations, and AI-ready platforms, with a strong focus on reliability, observability, and automation.

I enjoy working on complex systems—especially where cloud infrastructure, networking, and real-time workloads intersect. Over the years, I've helped teams move from manual deployments to automated pipelines, improved system visibility through monitoring, and supported workloads that require both performance and stability.

CORE SKILLS

- Cloud Platforms: Microsoft Azure, AWS
 - Containers & Orchestration: Docker, Kubernetes, AKS, Helm
 - CI/CD & Automation: Jenkins, GitLab CI/CD, Azure DevOps, Ansible
 - Monitoring & Observability: Prometheus, Grafana, ELK Stack, Azure Monitor
 - Systems & Virtualization: Linux (RHEL, Ubuntu, CentOS), Proxmox, Hyper-V
 - Networking & Security: Firewalls (OPNsense, pfSense), VPNs, Load Balancers
 - Databases: MySQL, PostgreSQL, Oracle
-

PROFESSIONAL EXPERIENCE

Remote AI Infrastructure Engineer

AI Inference & Telemetry Platform – MetaPlux Engineering Session

Jan 2025 – Present | Remote

Working remotely as part of an engineering initiative focused on AI-driven infrastructure and distributed telemetry systems.

- Deployed a GPU-based AI inference service capable of real-time image processing.
- Built REST APIs to expose inference, health, and telemetry endpoints.
- Designed a monitoring pipeline using Prometheus and Grafana to track latency, GPU usage, and system behavior.
- Worked on edge-to-cloud workflows, measuring end-to-end performance and reliability.
- Supported decision-making logic using live telemetry rather than static rules.

This role strengthened my experience in **distributed systems, performance engineering, and remote collaboration**.

DevOps Engineer Head

Hagbes PLC | Jan 2024 – Present | Addis Ababa

- Lead DevOps and infrastructure operations for enterprise applications.
 - Designed and managed Kubernetes clusters for internal platforms.
 - Built CI/CD pipelines using Jenkins, GitLab CI/CD, and Azure DevOps.
 - Deployed workloads on Azure VMs and AKS clusters.
 - Implemented monitoring and alerting to improve operational visibility.
 - Automated routine infrastructure tasks, reducing deployment time and manual errors.
-

DevOps Engineer

Atlas Computer Technology | Jun 2022 – Jan 2024

- Containerized applications to improve scalability and deployment consistency.
 - Supported production systems using Docker and Kubernetes.
 - Implemented centralized logging and monitoring.
 - Collaborated closely with developers to improve release stability.
-

Junior System Engineer

Atlas Computer Technology | Nov 2021 – Jun 2022

- Administered Linux servers and virtualized environments.
 - Assisted with firewall configuration and system hardening.
 - Monitored system health and supported incident resolution.
-

PROJECT HIGHLIGHTS

- AI Inference Platform with GPU acceleration and real-time telemetry
 - Kubernetes-based ERP deployment with CI/CD automation
 - Banking and financial systems infrastructure support
-

EDUCATION

Bachelor of Science in Computer Science

Admas University – Addis Ababa

CERTIFICATIONS

- Programming Fundamentals
- Continuous Deployment Pipeline
- Kubernetes Threat Modeling
