

REDIET SOLOMON

DevOps, Cloud & AI Infrastructure Engineer

Addis Ababa, Ethiopia | Open to Remote Roles

redisolomon@gmail.com | +251 904 117 514 | GitHub: github.com/Rediet2000 | LinkedIn: linkedin.com/in/rediet-solomon

Portfolio: <https://rediet2000.github.io/devops-portfolio/>

PROFESSIONAL SUMMARY

DevOps and Cloud Infrastructure Engineer with extensive experience in designing, deploying, and managing production systems across cloud, on-premise, and edge environments. Expert in CI/CD pipeline engineering, Kubernetes operations, and AI-ready platform development. Demonstrated success in delivering end-to-end automation, including multi-stage Jenkins pipelines and OpenTelemetry-instrumented monitoring for enterprise ERP and AI/ML workloads.

CORE SKILLS

Cloud & Compute: AWS (EC2 g4dn/g6/c6i), GCP, Microsoft Azure, NVIDIA Jetson AGX Orin

IaC & Automation: Terraform, Ansible, Jenkins (Groovy DSL), GitLab CI/CD, Azure DevOps

Containers & Orch: Docker, Kubernetes, AKS, Helm, Docker Compose multi-service stacks

Observability: Prometheus, Grafana, SigNoz, ELK Stack, OpenTelemetry, ClickHouse, DCGM

Networking & SDN: ONOS, SR-MPLS, BGP/OSPF (FRRouting), VXLAN, OVS, WireGuard, HAProxy, Traefik

AI/ML Infra: Ollama, CUDA/TensorRT, PyTorch, FastAPI, NLLB-200, DRL (DQN), LSTM, YOLOv8

Systems & Virt: Linux (RHEL/Ubuntu/CentOS), Proxmox, Hyper-V, OPNsense, pfSense

Databases: PostgreSQL (HA/clustering), MySQL, Oracle, ClickHouse, SQLite

Dev & Scripting: Python, FastAPI, Bash, Alpine.js, REST API design, Telegram Bot API

PROFESSIONAL EXPERIENCE

Remote AI Infrastructure & SDN Engineer

MetaPlux / DDEF Engineering | Jan 2025 – Present | Remote

- Deployed GPU-based AI inference services (YOLOv8, TensorRT FP16/FP8) on NVIDIA T4, L4, and Jetson AGX Orin for real-time image processing across a 5-node multi-cloud mesh (AWS + GCP + NYC edge).
- Built SR-MPLS traffic-engineered fabric with FRRouting, OSPF underlay, and VXLAN overlays — controlled by an ONOS OpenFlow SDN controller with full topology discovery.
- Designed monitoring pipeline with Prometheus (custom FRR and pipeline exporters), Grafana dashboards, SigNoz, and OpenTelemetry instrumentation for latency, GPU telemetry (DCGM), and network KPIs.
- Implemented edge-to-cloud inference workflows with DQN-based placement engine and LSTM time-series prediction for cost-optimal workload scheduling.
- Created systemd persistence services for VXLAN tunnels and OVS bridges; resolved Jetson kernel MPLS limitation via OVS-only MPLS forwarding.
- Contributed to 28-claim utility patent (NTX-001-NP) covering distributed compute orchestration, closed-loop rerouting, and intent-based API architecture.

IT Specialist & Developer

Hagbes PLC | Jan 2024 – Present | Addis Ababa

- Led DevOps and infrastructure operations for a multi-server Odoo 18 ERP stack (Odoo, AI VM, PostgreSQL/HAProxy cluster, SigNoz, Traefik) serving Ethiopia's leading construction machinery dealer.
- Designed and implemented a 14-stage Jenkins CI/CD pipeline with Telegram bot approval gates, reducing deployment time by 87%.
- Deployed OpenTelemetry Collector with OTLP export and batch/retry policies to ship structured logs to SigNoz; developed comprehensive Grafana dashboards for user activity and alerting.
- Built AI-powered multilingual customer support chatbot: Ollama (Llama 3.1 8B) for intent classification, NLLB-200 for 12-language translation (Amharic, Arabic, Oromo, Tigrinya), FastAPI backend, Telegram bot, and embeddable JS widget — integrated with Odoo 18 Helpdesk for auto-ticket creation.
- Developed 3 custom Odoo 18 modules (user manual, service monitor, Telegram user manager) with department-based RBAC, PDF preview controllers, and webhook architecture.
- Configured coturn TURN server for WebRTC, mailcow SMTP relay with SPF/DKIM, OPNsense NAT, and Cloudflare DNS for enterprise mail delivery.

DevOps Engineer

Atlas Computer Technology | Jun 2022 – Jan 2024

- Containerized applications using Docker and Kubernetes to ensure scalability and deployment consistency.
- Implemented centralized logging and monitoring using Prometheus, Grafana, and the ELK Stack; partnered with development teams to enhance release stability and CI/CD workflows.
- Supported enterprise banking and financial system infrastructure — performance optimization, high-availability configurations, and production incident resolution.

Junior System Engineer

Atlas Computer Technology | Nov 2021 – Jun 2022

- Administered Linux servers and virtualized environments; configured firewalls, system hardening, and VPN tunnels; monitored system health and supported incident resolution.

KEY PROJECT HIGHLIGHTS

- **DDEF Multi-Cloud Mesh:** End-to-end SDN fabric across AWS, GCP, and Jetson edge — SR-MPLS, ONOS, OVS, BGP/OSPF, with DRL placement engine and patent-ready architecture.
- **Hagbes AI Chatbot:** Multilingual customer support system (Llama 3.1 + NLLB-200, 12 languages, 62+ products, 6 brands) with Telegram bot, web widget, and Odoo Helpdesk integration.
- **Jenkins CI/CD for Odoo 18:** 14-stage pipeline with blue-green deployment, PostgreSQL backup, Telegram approval gates, and SigNoz observability annotation.
- **AI Inference Platform:** GPU-accelerated real-time inference (YOLOv8/TensorRT) with Prometheus/DCGM telemetry and edge-to-cloud orchestration.
- **Banking & Financial Systems:** Enterprise infrastructure support and optimization for banking platforms — high-availability, performance tuning, and production reliability engineering.

EDUCATION

Bachelor of Science in Computer Science

Admas University — Addis Ababa

CERTIFICATIONS

Programming Fundamentals • Continuous Deployment Pipeline • Kubernetes Threat Modeling • AI Mastery Training Program
