Rediet Solomon

IT Operations, Security & Platform Governance | Fintech & Banking Infrastructure

Addis Ababa, Ethiopia · redisolomon2@gmail.com · +251 904 117 514 · linkedin.com/in/rediet-solomon2 · github.com/Rediet2000 · Portfolio

Professional Summary

IT infrastructure and operations professional with 5+ years running mission-critical systems for Ethiopian banks and enterprises. Supported 24/7 production for Wegagen Bank (USSD/E-Banking), Hijra Bank and Siinqee Bank digital channels, and currently directs the enterprise Odoo 18 ERP infrastructure at Hagbes PLC.

Strong in the areas a regulated brokerage depends on: release and change control with approval gates, incident response and root-cause analysis, access control and server hardening, vulnerability management, security monitoring and detection, backup and disaster recovery, network security, and monitoring. Combines hands-on depth across servers, networks, databases and cloud with security governance (policy, risk assessment, threat modelling) and the documentation, reporting and coordination discipline needed for audits, vendors and management.

Core Competencies

Area	Skills
IT Operations Management	Server and workstation lifecycle, patch management and upgrades, licence tracking, 24/7 production support, SLA-driven operations
Platform & Application Management	Web portals, mobile backends, ERP (Odoo 18), digital banking and USSD platforms, multi-environment delivery (Dev, UAT, Staging, Production)
Release, Change & Incident Management	Approval-gated releases, UAT sign-off before go-live, blue-green deployments with rollback, incident response, root-cause analysis
Integrations	API and system integration, secure connectivity to third parties, payment and banking channel support
Network Design & Security	VLANs, routing, NAT, DNS/DHCP, OPNsense/pfSense firewalls, WireGuard and site-to-site VPN, TLS/SSL, reverse proxies, Cloudflare
Information Security	Access control (Active Directory, LDAP), password and account policies, encryption in transit, audit logging, server hardening, Kubernetes threat modelling
Application & API Security	Web application and REST API security assessment, authentication, authorization and access-control review (IDOR/BOLA, privilege escalation), secure code review, OWASP Top 10, OWASP API Security Top 10, OWASP ASVS, vulnerability validation, remediation guidance and retesting
Security Operations & Threat Detection	SIEM monitoring (Wazuh), detection rule development, threat hunting and behavioural analysis, MITRE ATT&CK-informed analysis, log analysis, incident triage and investigation, malware investigation, incident reporting
Security Governance & Risk	Security policy development and enforcement, ISO 27001 controls, risk assessment, STRIDE threat modelling, vulnerability management and remediation oversight, security audits, CVSS-based severity rating

Area	Skills
Security Tools	Burp Suite, Nmap, Nuclei, Metasploit, Wazuh, YARA, MobSF, Ghidra
Backup, DR & Business Continuity	PostgreSQL HA with Patroni, replication, scheduled backups, restore procedures, high-availability design
Monitoring & Observability	Prometheus, Grafana, Zabbix, SigNoz, OpenTelemetry, ELK, alerting and centralized logging
Infrastructure, Automation & DevSecOps	Proxmox VE, KVM, OLVM/OVM, Hyper-V, AWS, GCP, Azure, Docker, Kubernetes, Terraform, Ansible, Jenkins, GitHub Actions, CI/CD security integration, automated security checks, Redis, Bash, Python
Governance & Coordination	Technical documentation, operational handoffs, vendor and hosting-provider coordination, progress reporting to management

Work Experience

DevOps, System & Infrastructure Engineer — Hagbes PLC
Jan 2024 – Present · Addis Ababa, Ethiopia

- Direct the infrastructure for the enterprise Odoo 18 ERP across multiple virtual servers, covering PostgreSQL/HAProxy clusters, Traefik, Nginx, Cloudflare and SigNoz monitoring.
- Introduced controlled release management: a 14-stage Jenkins pipeline with automated quality gates, pre-release database backup, management approval checks and blue-green go-live with rollback, cutting delivery cycles by 87%.
- Run incident management and root-cause analysis for production incidents across network, server, container and database layers, raising service availability.
- Designed high availability and recovery for business data with PostgreSQL Patroni clusters, replication and scheduled backups; administer MySQL/MariaDB instances.
- Built centralized logging and alerting with OpenTelemetry Collectors, Prometheus and Grafana, giving management visibility into system health and incidents.
- Standardized server provisioning, patching and configuration on Linux and Proxmox VE with Terraform and Bash, reducing manual changes and configuration drift.
- Maintain separate Dev, UAT and Production environments with Docker Compose, Kubernetes and GitHub Actions so changes are tested before go-live.

AI Infrastructure & SDN Engineer — MetaPlux / DDEF Engineering
Jun 2025 – Apr 2026 · Remote

- Delivered a 5-node hybrid network across AWS, GCP and edge sites, standardizing configuration, compute provisioning and secure connectivity (OVS bridges, VXLAN tunnels).
- Established an end-to-end monitoring stack (Prometheus custom exporters, SigNoz, OpenTelemetry, Grafana) tracking network performance, latency and GPU health.
- Produced engineering documentation and runbooks for operational handoffs to client teams.

DevOps Engineer (Freelance) — Marsbes Tech
Jan 2025 – Present · Remote

- Deploy and operate client applications on Linux production servers with Docker and Docker Compose.
- Own PostgreSQL backup routines and infrastructure documentation in line with operational best practice.

DevOps Engineer — Atlas Computer Technology
Apr 2022 – Jan 2024 · Addis Ababa, Ethiopia

- Provided 24/7 operations, deployment and incident support for regulated financial-sector clients: Wegagen Bank USSD/E-Banking, Hijra Bank E-Banking and Siinqee Bank systems.
- Enforced security policies and high-availability standards on Linux servers, databases and application environments for banking workloads.

- Deployed full-stack monitoring (Prometheus, Grafana, Zabbix, SigNoz, OpenTelemetry, ELK) to detect and resolve incidents before they reached customers.
- Containerized core enterprise applications with Docker and Kubernetes to keep staging, UAT and production consistent.

Junior System Engineer — Atlas Computer Technology
Nov 2021 – Apr 2022 · Addis Ababa, Ethiopia

- Managed pfSense firewalls, VLANs, VPN tunnels and network security rules for corporate and client sites.
- Maintained virtualized environments and Linux servers against performance SLAs.
- Supported corporate infrastructure including Proxmox, OLVM, Nginx, Apache, WildFly, HAProxy, Zimbra, Mailcow and Exchange.
- Set up Zabbix and Grafana monitoring for faster incident resolution.

Key Projects

- **Digital Banking Operations (Wegagen, Hijra, Siinqee):** Kept USSD and e-banking platforms highly available through monitoring, controlled deployments and live incident support — directly comparable to running a brokerage's client portal, mobile app and order systems.
- **Controlled Release Pipeline for Odoo 18 ERP:** 14-stage pipeline with backup, approval checks, release tracking and blue-green go-live; 87% shorter delivery cycles with a safe rollback path.
- **High-Availability Data Platform:** PostgreSQL Patroni clusters behind HAProxy with replication and scheduled backups to protect business-critical records.
- **Enterprise Containerization:** Moved applications to Docker/Kubernetes with Traefik routing, giving identical staging, UAT and production environments for reliable acceptance testing.
- **Hybrid Multi-Cloud Network (DDEF):** Secure network and unified monitoring across AWS, GCP and edge sites.

Education

Bachelor of Science in Computer Science — Admas University, Addis Ababa, Ethiopia

Certifications

- Kubernetes Threat Modelling
- Continuous Deployment Pipeline
- AI Mastery Training Program
- Programming Fundamentals

Languages

Amharic — Native · English — Professional working proficiency
